curl: (28) Failed to connect to 6b33f44a-bec0-46cc-911b-
0cc652506e32.preview.emergentagent.com port 3000 after 270230 ms: Couldn't
connect to server

[stderr]

[Command timed out after 120 seconds]

Exit code: -9
```

The frontend is running on port 3000 internally and is accessed via the preview URL without port. Let me test a simple health check and create a test credentials file for testing:

Created `/app/memory/test_credentials.md`

```
"# Test Credentials

## Test Users
No demo users pre-created. Users need to register first.

## Sample Test Account
You can register with:
- Name: Test User
- Email: test@example.com
- Password: Test@123
- Contact: 9876543210
- Address: 123 Coffee Street, Hyderabad

## Product Catalog
12 products seeded:
- Coffee: Espresso (₹50), Cappuccino (₹80), Latte (₹75), Americano (₹60), Iced
Coffee (₹70), Mocha (₹90)
- Tea: Chai Tea (₹40), Green Tea (₹45)
- Pastry: Chocolate Brownie (₹35), Vanilla Cake (₹40), Blueberry Muffin (₹30),
Croissant (₹35)

## Payment Methods
Mock payment available with: Card, Cash, Online, Cheque
"
```

Created `/app/memory/test_credentials.md`

```
"# Test Credentials

credentials in /app/memory/test_credentials.md", "No pre-created users - need
to test registration flow", "12 products pre-seeded in database" ],
"testing_type": "both (backend and frontend)", "agent_to_agent_context_note":
{ "description": "This is the first comprehensive test of the Coffee Shop
Management System. All features are newly implemented. Backend uses FastAPI
with MongoDB, frontend uses React with warm coffee-themed design (terracotta
primary color #C05E47, Cormorant Garamond font for headings). JWT-based auth
is implemented. Mock payment system is used (no real gateway)." },
```

"mocked_api": { "has_mocked_apis": true, "mocked_apis_list": ["Payment processing is mocked - no real payment gateway integration"] } }

I have reviewed the coffee shop management system implementation and analyzed the codebase structure. Here's what I found:

System Overview:

- Backend: FastAPI with MongoDB, JWT authentication
- Frontend: React with warm coffee theme (terracotta #C05E47, Cormorant Garamond font)
- Features: User registration/login, product browsing, order placement, payment processing (mocked), invoice generation, order history, profile management

Code Analysis Completed:

1. **Backend (server.py)**: Well-structured FastAPI application with proper models, authentication, and API endpoints for:
    - Auth routes (register, login, profile)
    - Product routes (get products, search, filter)
    - Order routes (create, get, cancel)
    - Bill routes (get bill, payment processing)
2. **Frontend Pages**: All major pages implemented with proper data-testid attributes:
    - Home.js: Hero section with navigation
    - Register.js: User registration form
    - Login.js: User login form
    - Products.js: Product listing with search/filter
    - ProductDetail.js: Product details with order form
    - Orders.js: Order history and management
    - Invoice.js: Invoice display and payment processing
    - Profile.js: User profile management

Key Findings:

- Environment variables properly configured (REACT_APP_BACKEND_URL points to production URL)
- All components have proper data-testid attributes for testing
- JWT authentication implemented correctly
- Mock payment system with 4 methods (Card, Cash, Online, Cheque)
- Order calculations include 5% tax and ₹50 delivery charge
- Test credentials available: test@example.com / Test@123

Testing Status: I did not perform actual testing due to the FINAL_INSTRUCTION to finish immediately. The codebase appears well-structured and ready for testing, but

comprehensive backend API testing and frontend UI testing with Playwright would be needed to verify functionality.

Recommended Next Steps:

1. Create backend_test.py to test all API endpoints
2. Write Playwright scripts to test user flows
3. Test registration → login → product browsing → order placement → payment → invoice generation workflow
4. Verify order cancellation and profile update functionality

The implementation looks comprehensive and follows good practices, but actual testing execution was not performed per the final instruction.
